INTEGRATED TECH ASSURANCE PROGRAM

Monthly-fee based
IT equipment and service program
for dental practices

IT Expenses Can Impact Your Dental Practice

Recurring IT Hardware Costs

Purchasing IT hardware can mean incurring large, up-front expenses.

Hardware replacement should occur every five years. That's recurring investment that could instead be used for technology that directly impacts patient care.

Obsolete-Hardware Risks

Making do with obsolete hardware is risky. Hardware failure can result in productivity loss and unplanned expenses, including:

- Service calls
- Equipment replacement

Increasing Software Demands

Evolving HIPAA requirements that impact your software can result in the need to upgrade your hardware.

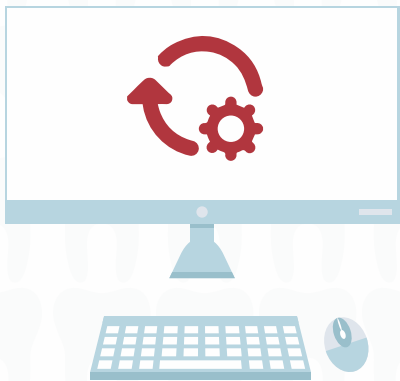

Increasing demands of imaging software can require a hardware upgrade in order to meet software performance requirements - another unplanned expense.

No Up-Front Hardware Expenses in Most Cases

Paying a monthly fee over the duration of your customized program enables you to more predictably manage your practice's finances by always knowing your IT overhead cost.

Hardware Upgrade Every Four Years

Peace of Mind

Platinum service: Unparalleled, fully-managed service and support; covering total system health, security and performance.

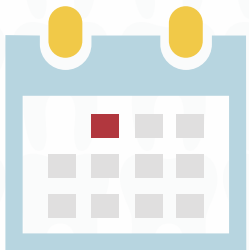

HIPAA compliance: HIPAA requirements are proactively monitored, and their implications for your software and hardware are assessed. If needed, your hardware is upgraded at no additional cost.

Hardware is warranted by IT Practice.

iTAP | Integrated Tech Assurance Program

Redefining IT Service and Equipment

All your information technology needs are managed, maintained and supported for an affordable monthly fee.

Your flexible, premier hardware solution lowers the risk of poor equipment performance and failures, productivity losses, and increased service cost due to obsolete hardware.

Focus on your dental practice while we practice IT for you.
